## BIRCHER RFGATE 2.2 TRANSMITTER

### FEATURES

- Transmitter for the RF Gate 2.1 & 2.2A & 2.2NG enables you to add to your existing installation
- Wireless signal transmission system for pressure sensitive safety edges can be used on automatic swing and sliding gates as well as industrial doors
- The system transmits the status of the pressure sensitive edges mounted on the mobile part of the gate, securely and contact free
- Information is transferred wirelessly to the switching device
- Simply mount, connect your safety edge/edges into the transmitter, program and it's ready
- BBC Bircher Smart Access set the standard when it comes to activation and safety products, providing market leading product in today's ever demanding safety market
- Easy installation and short start-up time
- Very versatile - can be used for residential and industrial applications
- Compatible with mechanical and resistive (8.2 KOhm) safety edges
- Uncompromising safety Cat 2 acc. to EN954-1 (EN ISO 13849-1 projected)
- Test input for start pulse or control signal
- Long service life, low operating costs due to wear free signal transmission (Average 2 year battery life)
- Long range (75m to 100m)
- Acoustic low battery warning
- RF Gate transmitter for safety edges
